[1] Setting and Infrastructure (SI)

[1.19] Impact of Setting and Infrastructure programs in supporting the Sustainable Development Goals (SDGs)

Songkhla Rajabhat University SDGs projects and sustainability initiatives.

**Description:**

Songkhla Rajabhat University (SKRU) is steadfast in its commitment to becoming a "Green University." We have implemented systematic infrastructure and environmental management policies to drive our mission of local development, creating positive social, environmental, and economic impacts. Key initiatives include:

- 1. Center for Environmental, Waste, and Energy Management for Sustainability:** This center serves as the core mechanism for comprehensive waste management (from source to disposal) and the promotion of renewable energy. Beyond reducing internal institutional costs, it acts as a model learning hub for local communities across the three provinces of Songkhla and Satun.
- 2. Smart Sustainability Database System:** We utilize digital technology to monitor and manage data, including an online waste bank system, electricity consumption tracking, and carbon footprint analysis, ensuring the most efficient and sustainable use of resources.
- 3. Landscape Management and Green Spaces:** The university prioritizes the expansion of green areas and the conservation of campus biodiversity. These spaces function as the "lungs" of the community, helping to reduce ambient temperatures and improve local air quality.
- 4. Promotion of Eco-Friendly Behavior:** We actively conduct internal campaigns to foster environmental consciousness among students and staff, driving behavioral change in waste reduction, energy conservation, and waste management practices based on the 3Rs principle (Reduce, Reuse, Recycle).

These programs actively support 15 of the Sustainable Development Goals (SDGs), specifically goals 1, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, and 17. The initiatives focus on the following key areas:

- 1. Society and Well-being:** Poverty alleviation (through equitable access to public spaces and facilities), promotion of good health and well-being, provision of quality education, achievement of gender equality, and the reduction of inequalities.
- 2. Environment and Energy:** Expansion of affordable and clean energy, ensuring access to clean water and sanitation, promotion of responsible consumption and production, climate action, and the protection of both terrestrial and aquatic ecosystems.
- 3. Economy and Infrastructure:** Encouraging green economic growth, developing resilient infrastructure, fostering sustainable cities and communities, and building global partnerships.
