[3] Waste (WS)

[3.5] Total volume organic waste produced this year

SAMPLE

Type of waste	amount (ton)					
	Produced		reduced	Treated		
	Last year 2024	This Year 2025		reused	down-cycled	up-cycled
organic	7.63	7.51	0.12	-	-	0.12

Description:

From June 2025 to May 2026, Songkhla Rajabhat University generated 7.51 tons of organic waste, a slight decrease from 7.63 tons in the previous year. The reduction of 0.12 tons was achieved through continued waste reduction and resource recovery activities implemented across the campus.

Organic waste mainly comprised fallen leaves, grass and tree trimmings from landscape maintenance, as well as food scraps from cafeterias and university events. These materials were collected and utilized for the production of compost, EM balls, and microbial fermentation solutions used in campus environmental management and agricultural activities. Through these initiatives, 0.12 tons of organic waste were converted into useful products instead of being disposed of as waste.

The university remains committed to promoting sustainable resource management and supporting the achievement of SDG 11 (Sustainable Cities and Communities), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action).
