[3] Waste (WS)

[3.9] Total volume inorganic waste produced this year

SAMPLE

Type of waste	amount (ton)					
	Produced		reduced	Treated		
	Last year 2024	This Year 2025		reused	down-cycled	up-cycled
inorganic non-toxic	53.76	52.36	1.4	0.39	-	-

Description:

During the period from June 2025 to May 2026, Songkhla Rajabhat University generated 52.36 tons of non-hazardous inorganic waste, compared to 53.76 tons in the previous year. The decrease of 1.40 tons was mainly attributed to the university's efforts to reduce the use of disposable materials and encourage waste separation across campus.

The inorganic waste generated during the reporting period mainly included paper, plastic, metal, and glass from teaching and learning activities, office operations, cafeterias, and student activities. A total of 0.39 tons of materials were reused through the university's waste management practices, helping to reduce waste generation and promote more efficient use of resources.

These activities support the university's commitment to sustainable campus management and contribute to the achievement of the United Nations Sustainable Development Goals (SDGs), particularly SDG 11 (Sustainable Cities and Communities), SDG 12 (Responsible Consumption and Production), and SDG 13 (Climate Action).
